

About Everything Part II

How many questions go unanswered and we
Pretend or assume the question was indeed answered.

Light. Light is explained by the most ignorant
Of all physics. Example: Light displays Wave
And Particle characteristics, how? Stupid
Explanation or more realistic answer ...

Choose from below:

- 1.) Stupid answer – once light displays either
Wave or Particle measurements, light
Reaches WAY BACK to the beginning
Of time and searches a MEMORY of its
Origin, either WAVE or Particle ... Quantum
Dumb Answer.
- 2.) Better Answer – Light is composed of the
Expanding clouds of electrons, forever expanding
And therefore able to be slowed by bending
Through water, or glass or something and THEN
Able to PICK BACK UP WHERE IT LEFT OFF!
How? Due to expansion packets pushing the
Slower moving (water, glass, etc.) electrons
Back up to momentum. Much Much Better!

Magnets and Behavior. Dumb Dumb Quantum Drums
Up STRONG and WEAK FORces... how quaint!
Considering we haven't even the foggiest Notion of the
Insides of an Atom, even after supposed Splitting and
Mastering nuclear (hah, Big Ha!) energy. The atom
Consists of a universal size, shape and condition the
Human mind has yet to put a saddle on! The output
Of electrons 1.) either expands forever, or, 2.) expands
And contracts at given intervals under given
Circumstances ... THAT'S IT! THAT'S ALL the
Science you can rely on to explain Gravity, Light or
Magnetics. Pure and almost simple!
